

Câu 2

```
test> use Company
```

câu 3

```
Company> use University
```

câu 4

```
University> db
```

Câu 5

```
University> db.dropDatabase()
```

Câu 6

```
Company> db.createUser( {user:"Hoang_Phu",pwd:"hoangphu",roles:[ { role:"readWrite",  
db:"Company"} ]})
```

Câu 7

```
Company> db.createCollection("customers")
```

Câu 8

Show collections

Câu 9

```
Company> db.cusotmers.insert( {first_name:"Jon", last_name:"Doe"})
```

Câu 10

```
Company> db.customers.insertMany([ {first_name: "John", last_name: "Smith"}, {first_name: "Alicia",  
last_name: "Zelaya"}, {first_name: "Jennifer", last_name: "Wallace"}, {first_name: "Ahmad",  
last_name: "Jabbar"}, {first_name: "James", last_name: "Borg"} ])
```

Câu 11

```
Company> db.customers.find()
```

Câu 12

```
C:\Users\HOANG PHU>mongoimport "E:\hi\books.json" -d Company -c books
```

```
